

HOSPITALINE TRACEABILITY MATRIX AND REQUIEREMENTS TABLE:

The idea is that patients and doctors can be registered in a database, and interact between them, modifying in the way other things in the database of the hospital, such as medicines that there may be

REQUIREMENTS TABLE:

1. The patient/doctor must be able to log in.
2. A client must be able to create an account (So they would be added to the database as a patient or doctor).
3. The patient must be able to make an appointment with a doctor of his choosing.
4. Patients must be also able to cancel an appointment or modify the appointment (Change the date...)
5. Doctors can prescribe the patients medicines, so they will have access to the hospital medicines supply
6. Patients must be able to delete their account
7. Patients must also be able to view doctors info (department, name,...)
8. As doctors have access to the medicine supply they must be able to modify this supply.
9. Patients: Book appointments, view prescriptions,access medical records(This allows patients to view their medical history (Past diagnoses, Lab test results, Treatment history, etc).
10. Doctors: Manage appointments, update patient records (This means that doctors can modify and add information to a patient's medical history in the system)
11. The user (either doctor or patient) must be able to change the password
12. The patient can claim any medicine from its medical record

	☑	The patient/doctor must be able to log in.	A client must be able to create an account	The patient must be able to make an appointment with a doctor of his choosing.	Patients must be also able to cancel an appointment or modify the appointment(Change the date...)	Doctors must be able to give the patients medicines, so they will have access to the hospital medicines supply	Patients must be able to delete their account
UC 1	Log in/Create account	X	X				
UC 2	Book apointment			X			
UC 3	Modify appointment				X		
UC 4	View doctor info						
UC 5	Delete account						X
UC 6	Acces medical records						
UC 7	Update medical record						
UC 8	Prescribe medicine					X	
UC 9	Modify medicine supply					X	
UC 10	Change password						
UC 11	Claim medicine						

	☑	Patients must also be able to view doctors info (department, name,...)	As doctors have access to the medicine supply they must be able to modify this supply, by decreasing the amount of supplies they have.	Patients: Access medical records	Doctors: Update patient records(This means that doctors can modify and add information to a patient's medical history in the system)	The user (either doctor or patient) must be able to change the password	The patient can claim any medicine from its medical record.
UC 1	Log in/Create account						
UC 2	Book apointment						
UC 3	Modify appointment						
UC 4	View doctor info	X					
UC 5	Delete account						
UC 6	Acces medical records			X			
UC 7	Update medical record				X		
UC 8	Prescribe medicine						
UC 9	Modify medicine supply		X				
UC 10	Change password					X	
UC 11	Claim medicine						X
